DIVISION 9 COLLABORATIVE

modulararts®

modularArts® InterlockingRock® is a collection of innovative products that create graceful architectural features with natural gypsum components. All edges and joints interlock for quick, accurate alignment and superior joint stability. Borrowing from the idea of drywall, the seams are blended with a fortified filler, allowing the creation of a seamless sculpted surface or 3-dimensional wall of nearly any size.

Repeating modules (PANELS, TILES, and BLOCKS) accommodate areas of any size and can be easily trimmed on-site. Components are designed for less crating waste, superior fire safety, indoor air quality, and ease of handling and installation.

modularArts® is dedicated to the manufacture of smart products. We eagerly apply the newest technologies in our design processes, and throughout our super-efficient U.S. manufacturing facility. We design, engineer, and manufacture technically advanced products with an ancient, tried and true building material—durable, fire-safe rock.

InterlockingRock® BLOCKS

Introducing InterlockingRock® BLOCKS by modularArts®. Stacked along with standard steel studs at 24" centers, they create fully dimensional, double-sided, rock walls. Our proprietary InterlockingRock® feature precisely aligns all sides for super fast installation. And as with all our products, you can breathe easy —blocks are composed of cast rock with a class A foam core, for healthy, fire-safe walls.
